                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Issued_Patents_AA:*

"2.2 Mb of contiguous nucleotide sequence from chromosome III of elegans.";

elegans.";

Nature 368:32-38(1994).

-1- FUNCTION: BINDS TO THE 40S RIBOSOME AND PROMOTES THE BINDING METHIONYL-TRNAI AND MENA (BY SIMILARITY).

-1- SUBUNIT: EIF-3 IS COMPOSED OF AT LEAST 10 DIFFERENT SUBUNITS SIMILARITY).

-1- SIMILARITY: BELONGS TO THE EIF-3 P135 FAMILY.
                                                                                                                                                                                                                                                                                       This SWISS-PROT entry is copyright. FUNCTION: THIS PROTEIN IS INVOLVED IN THE REPAIR OF MISMATCHES
IN DNA. IT IS POSSIBLE THAT IT CARRY OUT THE MISMATCH RECOGNITION
STEP. THIS PROTEIN HAS A MEAK APPASE ACTIVITY.
SIMILARITY: BELONGS TO THE DNA MISMATCH REPAIR MUTS FAMILY.
                                                                                                                                                                                                                                                                                                                                          FYDVEFAVANGNELLLDLSLTKVNATEPERTAMKKIQDCYVENGLISRYLDG

-I- FUNCTION: THIS PROTEIN IS INVOLVED IN THE REPAIR OF MISMATCHES IN DNA. IT IS POSSIBLE THAT IT CARRY OUT THE MISMATCH RECOGNIT.
STEP. THIS PROTEIN HAS A WEAK ATPASE ACTIVITY.
-I- SIMILARITY: BELONGS TO THE DNA MISMATCH REPAIR MUTS FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Blattner F.R., Plunkett G.
